PROFESSIONAL EXPERIENCE

Full Stack Software Engineer

City Shoppe (https://cityshoppe.com)

 June 2021 - May 2023   Austin-TX, US (remote)

CityShoppe is a digital marketplace startup for small businesses in the US and Europe.
As the second person in the dev team i was responsible for understanding everything about the business and tech stack, as well as **participating in all the software decisions and solutions finding**. I also **helped hands on building all the company's products**, developing key features and setting up infrastructure to make it reliable and available. These efforts resulted in **raising over 200 thousand dollars in investment** for the company.

- **Worked with people from 4 different countries** in one project, further developing my communication skills
- Developed products in NodeJS, NestJS and PHP, using AWS services (lambda, API gateway, ECS, EC2, etc) for infrastructure.

- -

Full Stack Software Engineer

Educando Seu Bolso (https://educandoseubolso.blog.br)

 August 2017 – January 2019 / August 2019 - June 2020

Financial Edutech that connects companies and people through courses, podcasts and tools. Business model through affiliate programs and digital products.
I joined the team as a intern and was responsible for **understanding the business from a tech perspective and helping build the business tools**. I quickly demonstrated skills of **communication** and **product development**, and was later hired. I **built a platform in Django** to manage all our data and **improve our tools, increasing efficiency for the marketing, commercial and technology teams**, as well as allowing for the business to grow faster. **Developed strong communication skills** as this job required constant communication with the commercial team to translate the idea into a user friendly tool.
