Lucca Augusto Santos

Software Engineer - I bring your ideas to life

Belo Horizonte, Minas Gerais, Brazil

Summary

About being a computer scientist: Free Software and Linux advocate,
I believe computers and technology are here to allow humans to
experience a better life and not have to worry about repetitive, mind
numbing types of work and allowing us to focus on what really
makes us live, but there's a long way until we get there, until then we
must try to have a healthy relationship with technology.
About not being a programmer: I like to explore my creative side by
doing illustration, skating and all sorts of creative work, i'm always
trying something new.

―――――
